

Market Volatility

A Normal Part of the Investment Experience

Baseball legend Yogi Berra once said, "It's tough to make predictions, especially about the future." This holds especially true when it comes to timing the stock market. Investment markets have recently experienced a few years of very strong returns, but market volatility has returned in early 2022 in a big way. Veteran investors understand that market volatility is a normal part of the investment experience.

Stock market volatility is the frequency and magnitude of price movements, up or down. The bigger and more frequent the price swings, the more volatile the market is said to be. For example, when the stock market rises and falls more than one percent over a sustained period of time, it is called a "volatile" market.

Beyond the market as a whole, individual stocks can also be considered volatile. You can calculate volatility by looking at how much an asset's price varies from its average price. Standard deviation is the statistical measure commonly used to represent volatility. During volatile times, some stocks are more volatile than others. Shares of an established large blue-chip company may not

make very big price swings, while shares of a high flying and newer tech company may do so often.

Stock market volatility can speed up when external events create uncertainty. Currently, the potential conflict overseas, the Federal Reserve's shift in policy, and the resurgence of inflation have all been noted as contributing factors to recent equity market volatility.

Market volatility doesn't mean that stocks are headed for a down or long-lasting bear market. Even when there are market declines along the way, an investor can still experience reasonable returns over a long period of time.

Why is Market Volatility Important

Understanding how volatility works allows you to put yourself in a better position to evaluate stock market conditions as a whole, analyze the risk involved with any particular security, and construct a stock portfolio that is a great fit for your growth objectives and risk tolerance.

It's important for investors to be aware that volatility and risk are not the same thing. For

stock traders who look to buy low and sell high every trading day, volatility and risk are deeply intertwined. Volatility also matters for those who may need to sell their equities in a short time frame, including investors who are older and closer to retirement.

For long-term investors who tend to hold equities for many years, the day-to-day movements of those equities should not affect their long-term plan. Volatility is part of the noise that could come while you are allowing your investments to compound long into the future.

Long-term investing still involves risks, but most of the time, those risks are related to being wrong about a company's growth prospects or paying too high a price for that growth – not volatility.

Common Market Terms to Know

Oftentimes, we hear the wrong words used in the wrong context. For educational purposes, it's important to clarify some stock market terms and their definitions.

DIP: a short-lived downturn from a sustained longer-term uptrend.

Example: Equity markets increased by 5% and maintained that level before dipping back down to 3% all within a few days or weeks.

CORRECTION: a 10% drop in the market from recent highs. Historically, corrections occur an average of about every eight to 12 months and last about 54 days.

Example: On December 17, 2018, both the DJIA and the S&P 500 dropped over 10% with declines continuing into early January.

BEAR MARKET: a long, sustained decline in the stock market. When the market declines 20% from its recent high, this is considered the start of a bear market.

Example: On Wednesday, March 11, 2020, The DJIA dropped 5.9%, for a total decline of 20.2% from a record high on February 12, 2020.

Common Market Terminology	
% Drop	Typically Referred To As:
Less than 5%	Dip
5 to 10%	Pullback
10% +	Correction
20% +	Bear Market
Stock market crash: A sudden and significant decline in equity prices over a very short time period.	

Crash: a sudden and dramatic drop in stock prices, often in a single day or week. Crashes are rare but typically happen after a long-term uptrend in the market.

Example: In 1929, the market crashed when it lost 48% in less than two months, ushering in the Great Depression.

Four Things to Know About a Volatile Market

One of the main reasons investors can earn high returns over the long run is because occasionally they experienced and lived through short downturns. Here are four things to know about market volatility:

- Volatile times can create market drops that can be **UNCOMFORTABLE**, but they are not **UNFAMILIAR**. Downturns are a normal part of the investment experience.
- Equity markets always offer Exit and Entry points. Over long periods of time, down markets offer investors the best entry point for new or additional monies.
- You make money in equities when you **BUY LOW and SELL HIGH**. A bad emotional decision to pull out of the market can lose an investor more money than any market correction.
- **Call us if you are concerned. We are here for you!**

Position Yourself to Best Navigate Market Volatility

Market declines happen and therefore, no matter what equity markets are doing, your plan should align itself with these three items:

1) Your Investing Goals

Every investor has unique goals they would like to attain. Knowing what your goals are is the first step to creating a path to achieve them. Your goals will determine your time horizon and risk tolerance.

2) Your Financial Timeline

Focus on your personal timeline instead of trying to time the market. During downturns, it may be tempting to pull out of the market, but you may miss out on a healthy recovery. Try to plan for your equity investments to maintain a long-term horizon and ignore the short-term fluctuations.

Remember, short-term movements of the market are unpredictable and do not abide by any average. For many long-term investors, there is no reason to subject themselves to daily market headlines. If you have a long-term investment horizon for your equity holdings of at least five years, chances are the current volatility will pass - possibly in a couple of weeks, months, or at the most, a few years.

According to a JP Morgan analysis, even missing a few days of a market recovery can be costly. This analysis looked at the S&P 500 over a 20-year period (January 2000 to December 2019). Investors who stayed fully invested would have earned more than 6% annually. However, those investors who missed just 10 of the days with the highest daily returns would have only earned 3% annually. During those 20 years, six out of the 10 best days occurred within two weeks of one of the worst 10 days.

3) Your Risk Tolerance

Risk tolerance is the level of uncertainty you are willing to accept to reap potentially greater rewards. Knowing what your risk tolerance or awareness is should be part of your financial plan. **As your financial advisor, one of our primary goals is to help you create a plan that considers your risk tolerance. If you are unsure what your risk tolerance is, call us so we can help you assess and determine this for you.**

Declines are a normal part of the investment cycle
S&P 500 Composite Index (1949- 2020)

Size of Decline	Average Frequency
-5% or more	About 3x per year
-10% or more	About once per year
-15% or more	About once every 3.5 years
-20% or more	About once every 6 years

What To Do in a Volatile Market

First, make sure you know what NOT to do - and that is panic. In times of market volatility, investors tend to become unnerved and anxious. This is not the best mindset to make rational decisions.

When equity markets experience unsettling fluctuations, ask yourself these three questions:

- 1) Have my financial timelines changed?
- 2) Have my financial goals changed?
- 3) Has my risk tolerance changed?

If you can answer "YES" to any of these questions, we urge you to promptly discuss these changes with us. As an investor, you need a plan that includes risk awareness. An integral part of this plan is to consistently keep in touch with you and monitor your situation.

If you have concerns, questions to ask us include:

- Can we review my financial plan?
- Can we revisit my risk tolerance?
- Are my investments diversified?
- Has the volatility presented us with any good opportunities to buy or sell?

Regardless of whether equities are rising or falling, investors should always focus on their own personal objectives. This includes:

- 1) Making sure you are comfortable with your time horizons.
- 2) Reassessing your risk tolerance.
- 3) Reconfirming your investments are compatible with both your time horizon and risk tolerance.
- 4) Maintaining liquidity for all short-term and near-term needs.

Market volatility should cause concern, but panic is not a plan. Market downturns as well as recoveries happen. It's always healthy to confirm that you fully understand your time horizons, goals, and risk tolerances. Looking at your entire picture can be a helpful exercise in determining your strategy.

It is always helpful and important to make sure you are comfortable with your investments. Equity markets will always have the potential to move up and down. Even if your time horizons are long, you may see some short-term downward movements in your portfolios. Make sure your investment plan is centered around your personal goals and timelines. Peaks and valleys have always been a part of financial markets and it is highly likely that trend will continue.

Discuss Any Concerns With Us

We are always available to revisit your financial holdings to make sure they are still in line with your timeline, goals, and risk tolerance.

When reviewing your situation, we will always consider your goals as well as your feelings about risk and the markets and review your unique financial situation before providing our advice and recommendations.

As a reminder, please keep us apprised of any major life changes, such as family or health issues, or any changes in your retirement goals. The more knowledge we have about your unique financial situation, the better equipped we will be to best advise you.
